Information Program & Fundraising Dinner

Saturday, Mar 7th

@ HTCC

7 PM to 10 PM

What do we know?

- Gastrointestinal/Liver cancers: most common cancers in India
- Hepatitis B: One of the major preventable causes of liver cancer
- 40 million people in India carry the virus
- People can develop liver failure and liver cancer
- 1 of every 25 children get the disease by transmission from infected mothers during birth

Our Activities

- Free vaccinations for Hepatitis B prevention
- Education for prevention of digestive cancers
- Mobile endoscopy unit for free cancer screening
- Ultrasound for liver cancer screening

Ask us how you can join this noble effort...
